# The stunning silver transformation of **SILVERWOOD**

Finland Autumn : Pine Decking With Silverwood coating

Silverwood is a revolutionary all-natural coating that transforms wood surfaces into a stunning silver color while providing enhanced protection against brown fungi and increased fire retardancy.

Its unique silicate-based formula penetrates the wood cells, making it anti-fade and virtually maintenance-free. Silverwood also boasts an excellent solar reflection rate, keeping surfaces cooler in direct sunlight. Safe for both animals and children, Silverwood is the eco-friendly choice for beautiful, durable wood finishes.

PERMANENT

EXCELLENT UV REFLECTION RATE

INCREASED SURFACE HARDNESS

BROWN FUNGI PROTECTION

REPELS DIRT

ORIGINAL WEATHERED TIMBER BENCH

2 WEEKS AFTER SILVERWOOD

10 WEEKS AFTER SILVERWOOD

## Balau Bench Revitalisation With Silver Wood

Silverwood recently completed a project in which they revitalised timber benches in Singapore's national parks using their all-natural Silver Wood coating. The transformation process took 10 weeks, which involved preparing the benches for the coating and allowing sunlight to shine onto the coated benches. Within two weeks, beautiful shades of grey appeared, and by the end of 10 weeks, the grey shades had become consistent and completed. Thanks to Silverwood's formula, which penetrates the wood cells, the coating strengthened and transformed the timber benches into stunning silver pieces that are anti-fade and virtually maintenance-free.

Furthermore, Silverwood's all-natural coating is not only beautiful but also permanent, providing long-lasting protection against fading and reducing the need for future recoating. This makes it a worthwhile investment for a lifetime, and the timber benches in Singapore's national parks serve as an example of the stunning results that Silverwood can achieve.

BAREFOOT FRIENDLY

NATURAL SOURCES

BOCIDE FREE

NON-TOXIC

Silverwood on Accoya (Radiata pine)

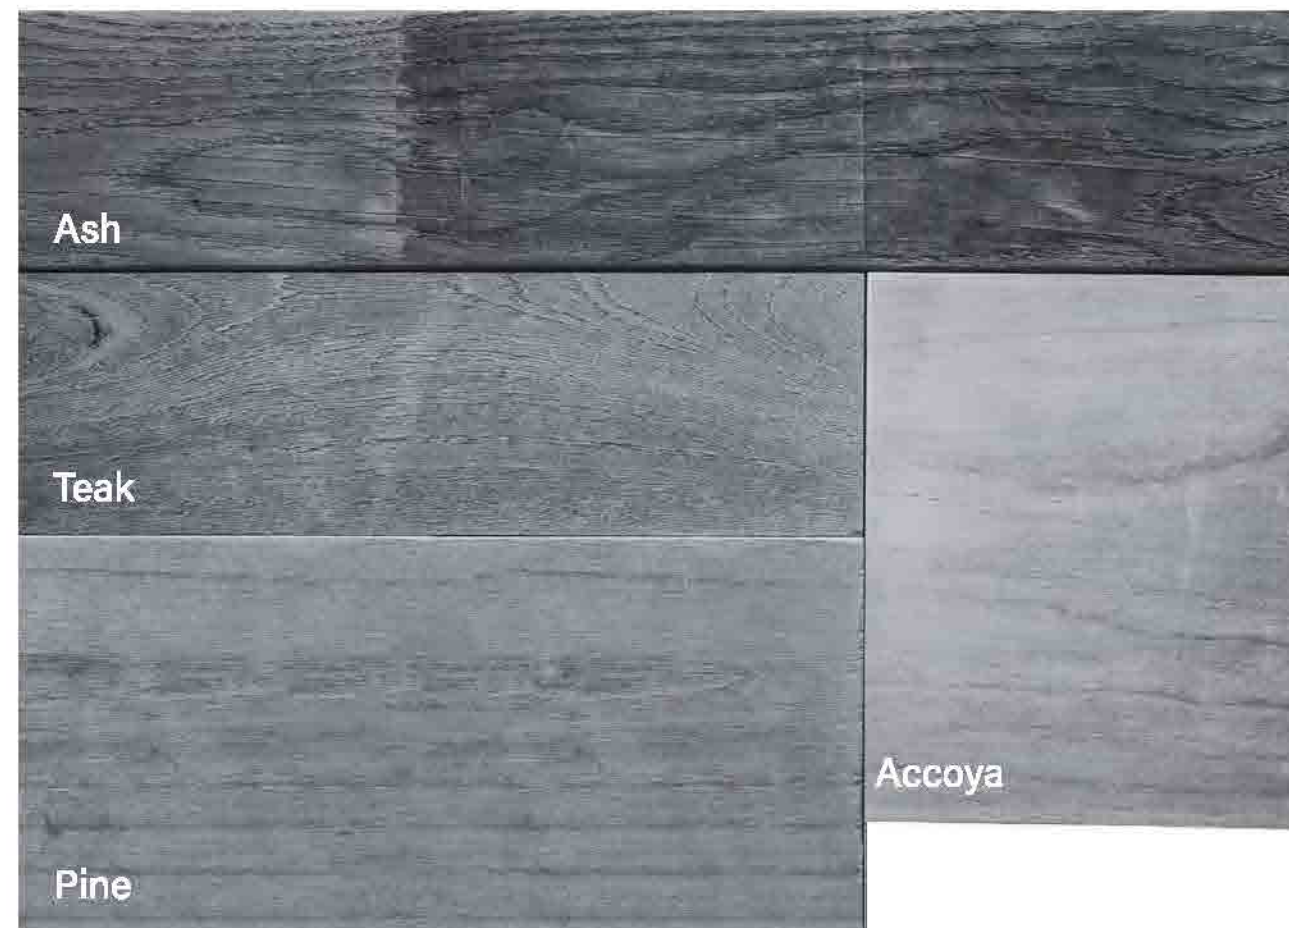

Great for timber restoration and revitalization.  
All natural, eco-friendly for the environment.  
A natural process that is non-toxic.

Areas of application includes:

Outdoor timber furniture such as trellis, fences, benches and any timber surface.  
Timber rooftops, deckings, floorings, stairway and platforms.

Applicable to many timber.

## 10 benefits of Silverwood

Provides long-lasting protection against fading

Eco-safe for animals and children

Virtually maintenance-free

Excellent solar reflection rate, reducing heat buildup

Anti-fungal properties protect against brown fungi

Transforms timber into a beautiful silver colour

Increases timber surface hardness

Penetrates wood cells, creating a permanent finish

Offers increased fire retardancy

Sustainable and all-natural.
